Access Templates

In the menu *System > Access Control > Access Templates* you get a Flexigrid-table with a list of the applying access templates.

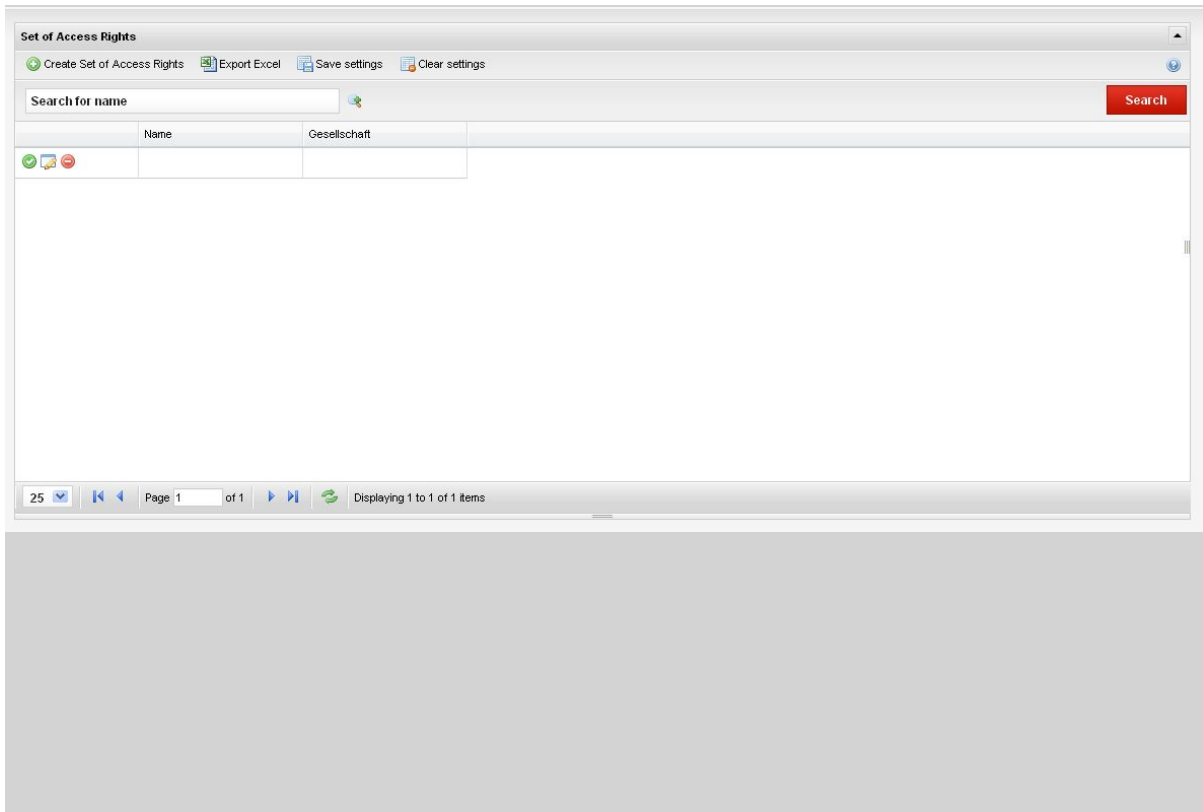

Table of access sets

Click on the button: *Create Set of Access Rights* to get a form for creating a set of permissions.

Form to alter or create sets for access permissions

Assign the new set the desired groups for read- and write-access and save the permissions template with the *Save*-button.

If you don't want to save the data click on the *Back* button and you are returning to the Flexigrid with the template-list.

Exporting Access Templates

With the button: *Export Excel* you can start the export of the list of permission sets.

You can choose in the dialog to view or to save the list in the system. In the second case you will be asked to the path of the target folder.

Yet you have another question leave it on this site for the metamagix-support-team.
